Working Prototype Known Problems Report
GroupThink
GroupThink Development Team
11/23/16

List of functions not working correctly:

def edit_project():
        Problem: Removing members does <u>not</u> remove the project from
        auth_user.my_projects (This will affect users_not_in_projects later on)
        Fix: Delete the record from the specified user

        Problem: Deleting a project will not remove the reference in
auth_user.my_projects
        Fix: Retroactively delete the reference in the auth_user table

def profile():
        Problem: Message button is nonfunctional due to time constraints.
        Fix: Implement javaScript function to handle sending and receiving messages.

        Problem: If user changes their email in edit_profile, they are no longer
        affiliated with previous projects.
        Fix: Remove the ability for users to change their email after sign-up.

def edit_profile():
        Problem: A lot of extraneous info that is not relevant is taken in
        Fix: Remove these fields

def members():
        Problem: Admin should displayed as normal member of class
        Fix: Before displaying a user, check to see if they are an admin and modify

Layout.html:
        Problem: Navbar covers top of page when not in fullscreen
        Fix: delve into layout.html

def project():
        Problem: site breaks if invalid course_id or project_id is passed (ie if
        someone typed in the URL)
        Fix: Redirect user to another page if either of these arguments are passed.

def edit_course():
        Problem: If a user who is not authorized types in the correct url arguments for
        a given course, they are able to edit it.
        Fix: Check that the user editing is the admin of the course, other redirect
(not
        authorized).
